Name: **Victor**
Country: **Sweden**

Number of servers: **69**
Issue: **Hacked WordPress Installations, Server Overloads**

Please introduce yourself!

I am Victor Jerlin, the founder and CTO of Internet Vikings. Over the past 13 years, we have expanded our reach across all six continents, setting up regional offices and data centers in ten different countries worldwide. By now, Internet Vikings has grown to become an industry leader.

What are the key products/solutions offered by you right now, and how complete is the portfolio?

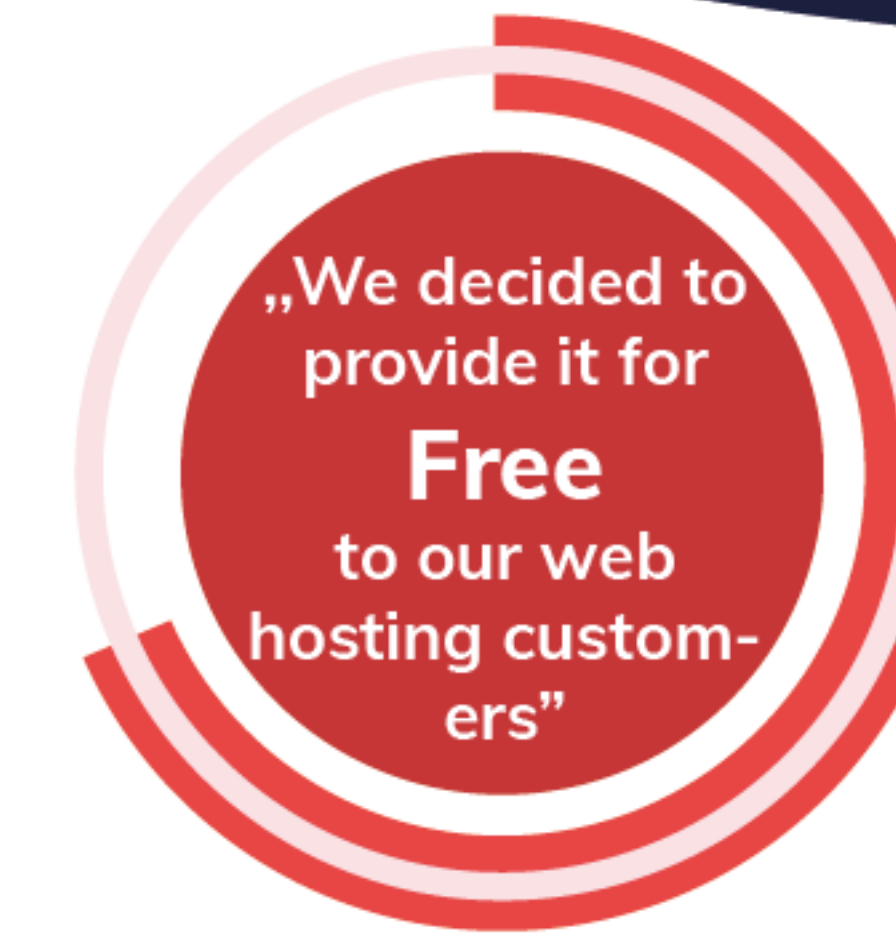

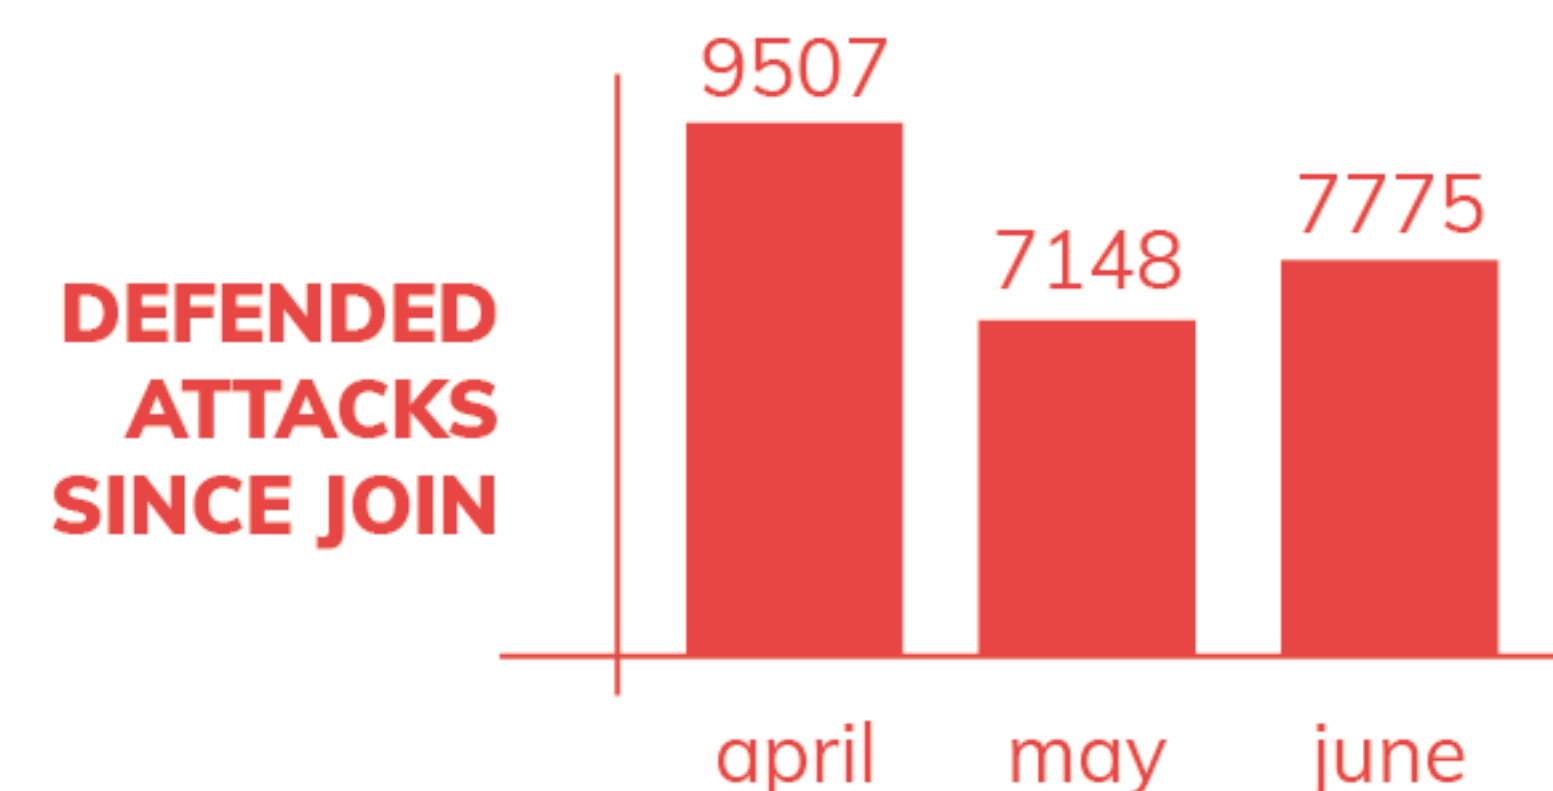

Our principal areas of service consist of Hosting Solutions, including Cloud Hosting, dedicated servers, IP-addresses, domain management, managed hosting, managed brand traffic protection, and multi-level domain protection for website availability.

When did you decide to start using BitNinja?

We started using BitNinja in 2019 for our customers who mainly do web hosting.

Did you take cybersecurity seriously from the beginning at the company?

Information security has always been important. Back then, security mainly centered on security mechanisms such as having firewalls, secure passwords, and so on. But, today, we have incorporated it into everything - even HR process and procurement, making it a vital component of every project we start.

When did you decide to start using BitNinja?

We started using BitNinja in 2019 for our customers who mainly do web hosting.

What kind of issues BitNinja resolved for your company?

As a result, we have noticed a drastic decrease in hacked WordPress installations or server overloads due to minor DDoS attacks or brute force attempts. The drop was so dramatic that we decided to provide it for free to our web hosting customers. This is because it overloaded our customer service staff too much, and so the customers experienced fewer issues.

What are the most important things you look for in a cybersecurity tool?

It depends on the purpose. One of the big BitNinja selling points is that it is independent; the filtering and blocking are done locally on the server, so we need not transfer any data out of the server.

Did you find it challenging to implement BitNinja?

It takes approximately 30 seconds to set up on a new server; it's easy..

How would you describe your experience with BitNinja in 3 words?

“ It just works! ”
